

SomnoDent® is a custom made device worn during sleep to increase the upper airway volume and reduce collapsibility. SomnoDent® Flex & Classic devices each utilize a unique patented fin coupling component, maximizing patient comfort and compliance.

Health Benefits

SomnoDent® treatment has also been shown to have a clinically significant impact in reducing patients' blood pressure and has been predicted to reduce the risk of stroke. In addition, this blood pressure reduction was apparent in the early morning, which is the time of peak risk for acute myocardial infarction.

Clinically Proven

14 independent studies and over 12 years' worth of research demonstrate SomnoDent efficacy and significant clinical benefits. Exceptional levels of compliance 88%, treatment efficacy 91% and acceptance 96% of patients with OSA have been cited.

The Thorton Adjustable Positioner - Sleep apnea is the temporary cessation of breathing during sleep. Typically indicated by snoring, often times sufferers will awake gasping for breath. Apnea related disturbances occur repeatedly, resulting in a restless sleep and daytime drowsiness. This disease can cause serious health issues including increased blood pressure and the restriction of oxygen to the brain and blood stream.

How it Works

TAP® is made of two custom inter-occlusal parts that fit over the mandible and the maxilla. The upper portion of the device hooks into the lower portion, enabling the mandible to be pulled forward. Using a dial mechanism, the appliance is titratable allowing adjustment to determine the degree to which the jaw is held forward. By holding the mandible forward, the TAP maintain a clear airway to reduce snoring and improve breathing.

New TAP® Elite allows more lateral movement, improving patient comfort and compliance.

Advantages

Alleviate Sleep Apnea: Research shows it is the most successful obstructive sleep apnea treatment available.

Reduce Snoring: More than 96% of patients using the appliance have stopped snoring.

Improve patient's sleep: The quality of their sleep has a huge impact on the overall quality of your patient's life.

Indications

Anti-snoring device

Obstructive Sleep Apnea

Contraindications

Loose teeth or dentures

Central Sleep Apnea
